

Sneaker Resale Business Analysis

Defile de Mode · 2022–2024

Author: Baihaqsani

Tools: Python · Pandas · Matplotlib

Data: 1,038 transactions · 3 years · 7 sales channels

Business Questions Answered

- 1. Which sales channel is most capital-efficient?
- 2. Which brand generates the best return on capital invested?
- 3. How much capital is locked in unsold inventory?

Key Findings Summary

Rp 364M Total Net Profit (879 sold transactions)	Rp 288.7M Capital Locked in Dead Stock	16.5% % of Total Capital Frozen	35.1% Highest Margin (Adidas, n=123)
--	--	---	--

1. Sales Channel Analysis

Margin is calculated as: **(total profit ÷ total capital) × 100**. Only items with capital > 0 are included to ensure margin reflects true capital efficiency.

Channel	Transactions	Total Capital	Total Profit	Margin %
Novelship	2	Rp 1.3M	Rp 683K	54.2%
Ox Street	5	Rp 6.2M	Rp 3.1M	49.9%
Alias	301	Rp 460M	Rp 131M	28.5%
Tokopedia	49	Rp 106M	Rp 28M	26.7%

Shopee	11	Rp 24M	Rp 5.8M	24.4%
Direct Transfer	200	Rp 323M	Rp 74M	22.9%
Kick Avenue	307	Rp 482M	Rp 106M	22.0%

Note: Novelship (n=2) and Ox Street (n=5) show high margins but are statistically unreliable due to very low transaction counts.

Key Finding: Alias (28.5%, n=301) vs Kick Avenue (22.0%, n=307) is the most valid comparison — comparable volume, 6.5 percentage point margin gap. Shifting capital allocation from Kick Avenue to Alias has potential to improve overall efficiency without sacrificing volume.

2. Brand Analysis

Same methodology as channel analysis. Zero-modal items (raffle winnings) are excluded.

Brand	Transactions	Total Capital	Total Profit	Margin %
Converse	4	Rp 7.9M	Rp 3.5M	44.2%
Crocs	4	Rp 10.5M	Rp 3.8M	36.5%
Adidas	123	Rp 212M	Rp 74M	35.1%
Asics	20	Rp 38M	Rp 10.8M	28.1%
Nike	662	Rp 1,112M	Rp 253M	22.8%
New Balance	42	Rp 76M	Rp 15.2M	19.9%
Salomon	1	Rp 3.3M	Rp 380K	11.7%
Yeezy	1	Rp 1.2M	Rp 134K	11.6%

Note: Converse and Crocs (n=4 each) margins are unreliable due to very low volume.

Key Finding: Adidas (35.1%, n=123) outperforms Nike (22.8%, n=662) by 12 margin points. Nike dominates volume (75% of transactions) but its capital efficiency is significantly lower. Increasing the proportion of Adidas purchases would improve overall returns.

3. Dead Stock Analysis

Dead stock = items purchased but not yet sold. Capital tied up here cannot be redeployed to buy new inventory — this is the opportunity cost of unsold goods.

Rp 288.7M Total Capital Locked	159 units Unsold Items	16.5% % Capital Frozen	15.3% % Units Frozen
--	--------------------------------------	----------------------------------	--------------------------------

Purchase Year	Units	Capital Locked	Age (as of mid-2026)
2022	46 units	Rp 96.8M	~3.5 years
2023	20 units	Rp 41.8M	~2.5 years
2024	92 units	Rp 149.0M	~1.5 years
2025	1 unit	Rp 1.1M	~1 year

Critical Finding: As of mid-2026, all 159 unsold items have been stagnant for over 1 year. The 2024 cohort is the most critical: 92 units, Rp 149M — 52% of all frozen capital — purchased in a single year that failed to sell. This signals a potential misjudgment in 2024 purchasing decisions.

4. Conclusions & Strategic Recommendations

#	Finding	Recommendation
1	Alias margin (28.5%) outperforms Kick Avenue (22.0%)	Shift capital allocation toward Alias
2	Adidas margin (35.1%) far exceeds Nike (22.8%) — Nike has 5x proportion of Adidas purchases	Nike decrease proportion of Adidas purchases
3	Rp 288.7M (16.5% of capital) locked in dead stock, all by year end	Begin structured liquidation, prioritise 2022 cohort
4	2024 purchasing resulted in largest dead stock concentration (Rp 149M)	Review 2024 buying criteria before scaling

5. Limitations

- Novelship (n=2) and Ox Street (n=5): margins unreliable due to very low sample size
- No customer-level data available (marketplace model) — RFM / customer segmentation not possible
- Date fields had inconsistent entry quality — holding period analysis was not performed
- 21 raffle items (zero cost) are excluded from margin calculations but included in total profit
- Analysis covers closed transactions only — market price trends are not incorporated
